

Figure 4. Mean runoff coefficient (% of rainfall rate), soil moisture at 3 cm depth (% volume) and sediment concentration (g l<sup>-1</sup>) for the four treatments at 1-minute intervals for the Dry and Wet runs. Treatments within the same run were statistically different when followed by different letters. Differences between runs for a given treatment were significant when letters are highlighted differently (plain text vs. underlined). Treatment abbreviations are: u\_: uncompacted, c\_: compacted, bare: bare soil, slash: slash.
