

Table 3: Bushpig tracks encounter rates in four vegetation types of the NGR. An event indicates a cluster of tracks on a particular transect. Tracks indicates number of bushpigs inferred from tracks for each event. The t and P -values reflect the outcomes of a repeated-measures linear mixed model using REML, comparing the bushpig encounter rate in the Bushveld with each of the other three habitats. These differences are mostly statistically significant with Thicket having the highest encounter rates.

Events				
	Mean	Standard Error	t	P
Sand	1.311	0.457	2.868	$P<0.05$
Thicket	3.024	0.357	8.458	$P<0.001$
Water	0.982	0.366	2.681	$P<0.05$
Bushveld	0	0.429	0	n/a
Tracks				
	Mean	Standard Error	t	P
Sand	2.566	2.608	0.984	NS
Thicket	15.601	2.039	7.649	$P<0.001$
Water	5.374	2.09	2.571	$P<0.05$
Bushveld	0	2.696	0	n/a
