

Figure 1. Respiratory viruses identified in specimens tested for (i) SARS-CoV-2 + MRVP versus (ii) MRVP alone

Footnote: Counts represent frequencies of viruses identified regardless of infection category.

Percent positivity is calculated based on total number of specimens tested in each group.

Total number of viruses identified were 2,294 viruses and 4,360 viruses in specimens tested by SARS-CoV-2 +MRVP and MRVP alone, respectively. Of 2,294 viruses identified in SARS-CoV2+MRVP group, 2,129 were detected as single virus infection and 165 as co-infections of dual (n=156) or triple (n=9) viruses. Similarly, of 4,360 viruses detected in the MRVP group, 3,948 were detected as single virus infection and 412 as co-infection of dual (n=400) or triple (n=12) viruses.
