

Figure 3: Comparison of Trends of QTcF during the first two weeks of initiation of BDQ.

#Mean rise of QTcF of 17.13% were noted overall from the baseline (Red line with X marker) with $p, 0.001$.

Post hoc analysis among the subgroups:

Subgroup 1 (initial rise then fall, blue line with ♦ marker), p values (D1 & D7) 0.002, (D1 & D14) 0.001 and (D7 & D14) 0.04 respectively

Subgroup 2 (initial fall then rise, yellow line with ■ marker), p values (D1 & D7) 0.001, (D1 & D14) 0.86 and (D7 & D14) 0.03 respectively

Subgroup 3 (rise followed by rise, green line with ▲ marker), p values (D1 & D7) 0.001, (D1 & D14) 0.001 and (D7 & D14) 0.001 respectively
