Contents:

Figures S1 to S3

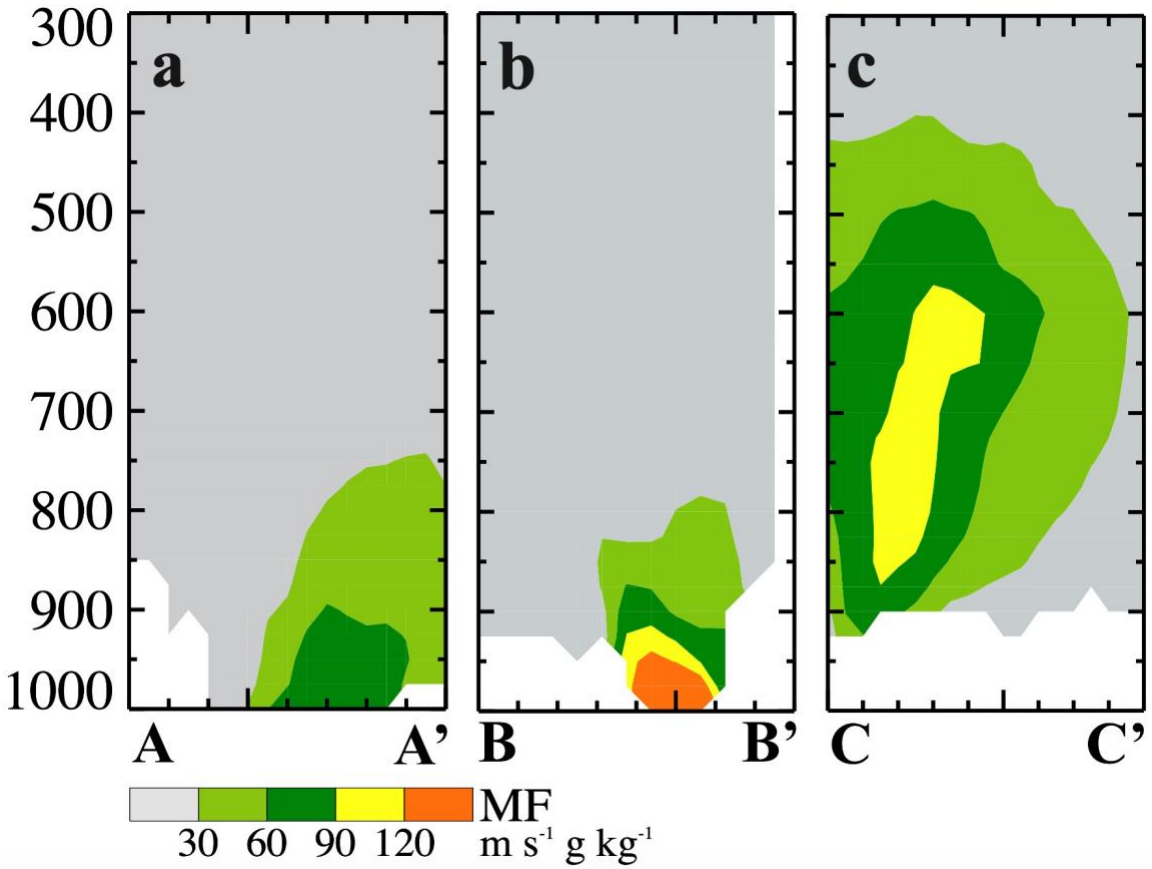

Figure S1. The same as Figure 4b-d, but for April 13, 2017.

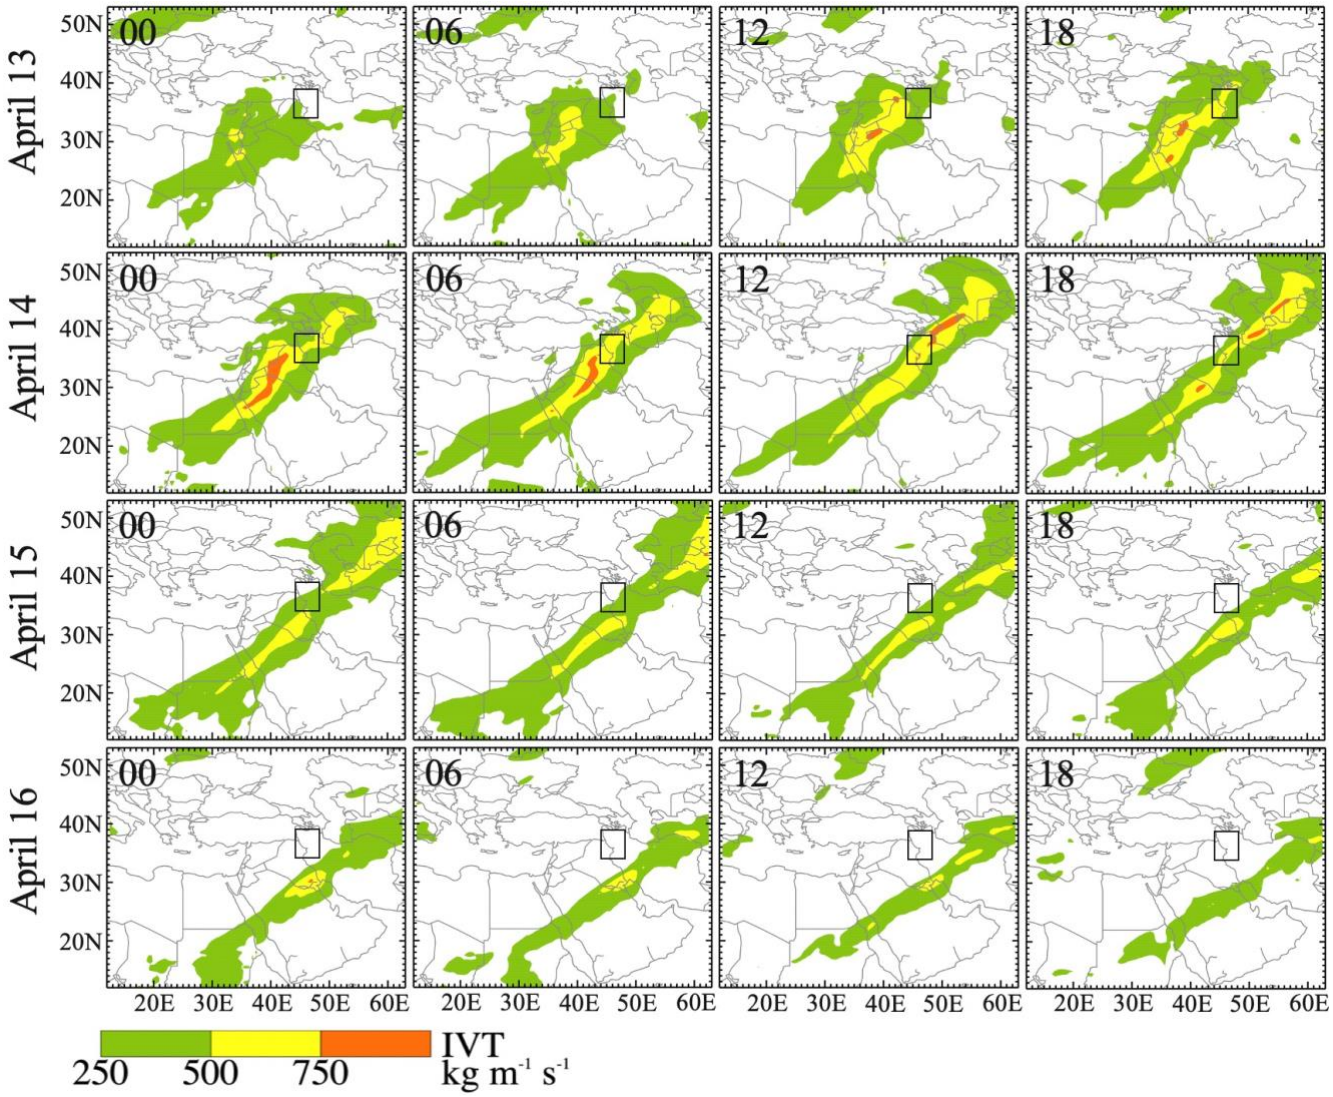

Figure S2. Horizontal pattern of the vertically integrated water vapor transport (IVT) at 6-hour intervals before, during and after the rainfall event. Note that for better presentation purpose, the IVT is plotted at larger intervals than the daily-mean plots (i.e., Figures 2c, 5a-d, and S3).

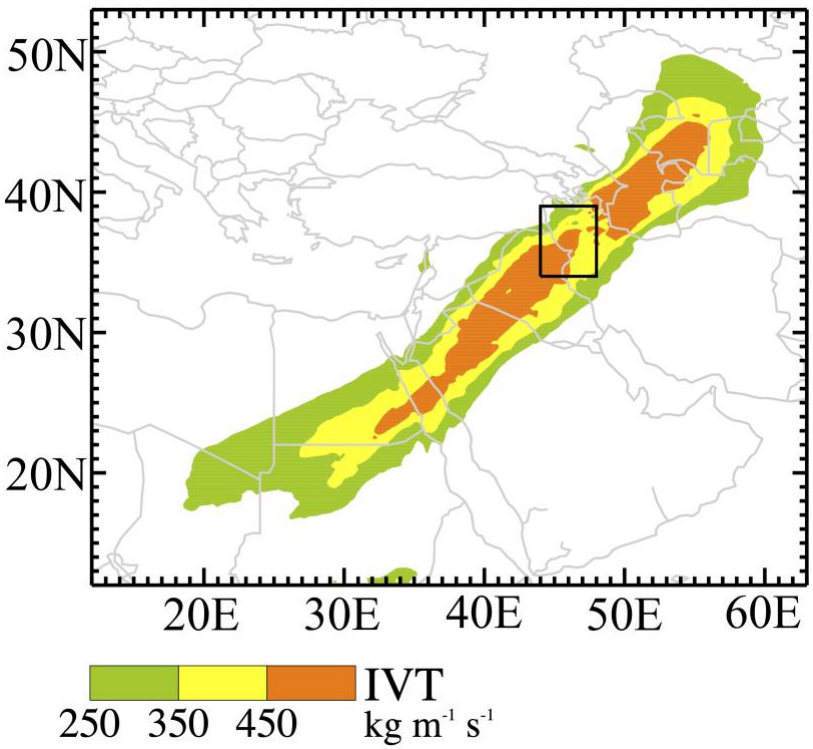

Figure S3. Horizontal pattern of the vertically integrated water vapor transport (IVT) during April 14, 2017, using Reanalysis from version 5.16 of the Goddard Earth Observing System (GEOS) model.
